## Professional Experience

### Web Developer - Youngevity

August 2017 - Present

Web Development in an Agile agency environment.

Coordinated with Digital Marketing Director on development needs, features & implementations on current Wordpress themes.

Collaborated across departments with project managers, copywriters, product managers, graphic designers, UX/UI designers, and other engineers.

Ran optimizations on WordPress sites from image optimizations, removing unneeded plugin files/ JavaScript files, ran Gulp minifying tasks on JS, and CSS files. Incorporating WebPack for asset bundling.

Worked independently on projects with a strong sense of ownership and urgency to get projects to meet deadlines.

Built WordPress sites from start to finish using starter themes Roots Sage and Foundation Press with HTML5, CSS, JavaScript, PHP, JQuery.

Development of WordPress sites in a local development environment with Gulp task Runner and/or Webpack asset bundler with the use of NPM to install needed dependencies and development dependencies.

Use of a MySQL database and SQL to query databases, tables to retrieve data with SELECT, UPDATE, INSERT DELETE SQL statements.

Redis and Varnish caching systems used on WordPress and Magento sites.

Use of Roots Bedrock within Roots Sage theme for a modern javascript application workflow with an MVC file structure

## **Web Developer - Youngevity**

WordPress development with the use of GIT version control with commands git add, git commit, git push, git pull, git clone, git add, git status, git branch, git checkout, git remote, git log, git diff.

Worked on various projects at a time, remaining flexible to rapidly changing requirements.

Troubleshooting on local development and production sites.

React development, setting up a React Quiz application, incorporating all necessary dependencies and development dependencies for the application.

PHP development within WordPress adding features, removing features based on current needs within theme template files.
